

# PROCESS ANALYTICS **PREVENTATIVE & SPARE PARTS** MAINTENANCE KITS

# HOW MUCH WOULD IT COST YOU IF YOUR INSTRUMENT WENT DOWN FOR A DAY?

It's a question that businesses ask themselves, but sometimes it's too late.

Ordering a PAC maintenance kit is a great way to prevent costly downtime and to ensure regular and routine maintenance for your instruments. PAC offers both preventative maintenance and spare part kits that allow you to plan ahead and minimize any unforeseen downtime.

## PREVENTATIVE MAINTENANCE KIT

You can schedule routine maintenance on your instrument with a preventative maintenance kit. Preventative maintenance can include safety checks, proper functioning of your instrument, and it can prevent age-related failures. The preventative maintenance kits include consumables and spare parts as recommended by the manufacturer.

## SPARE PARTS KIT

We recommend that you have a spare parts for your instrument. We'll give you a list of spares to buy based on the analyzer that you purchase. You can reduce unexpected costs and downtime with a spare parts kit on hand. When you order the parts from us, we'll teach you how to change the parts so there's no delay in getting the instrument repaired, or we can assist and do the work for you.

### PAC Instruments with Maintenance Kits:

✔ NSure

✔ ViscoSure

✔ MicroDist

✔ 70Xi Process

### PAC maintenance kits will help with the following:

- Ensure that your analyzer is running optimally and identify possible problems before they cause bottlenecks in workflow
- Ensure that results are consistent and repeatable
- Improve production yields
- Minimize test errors and analyzer stoppage
- Improve equipment life span
- Limit production delays
- Reduce safety incidents
- Avoid budget problems
